What Drives BioBlue?

At BioBlue, we are driven by a simple mission – to set the benchmark for Australian AdBlue® supply.

Quality

BioBlue AdBlue® is VDA Certified and manufactured to exceed ISO 22241-1 quality management standards.

Reliability

Our robust distribution network means you can rely on us to deliver your AdBlue®, where ever you need it.

Customer Service

We pride ourselves on our customer service – we aim to make your AdBlue® supply easy and hassle-free.

Our Manufacturing and Distribution Capabilities

BioBlue operates manufacturing facilities across Australia, and a robust, nation-wide distribution network of dedicated AdBlue® bulk tankers. Our streamlined processes, enhanced delivery systems, and specialized AdBlue® storage and equipment solutions ensure that choosing BioBlue grants our customers a distinct competitive advantage.

From simple 10L AdBlue® containers to 50,000+ Litre deliveries, we can manage your requirements. Get in touch to learn more about how we can tailor an AdBlue® solution for your business.

AdBlue® technical Information

What is AdBlue®

AdBlue® is an emissions-reduction technology for SCR-fitted diesel vehicles

AdBlue® is a 32.5% aqueous urea solution used to reduce exhaust emissions in Selective Catalytic Reduction (SCR)-fitted diesel vehicles. AdBlue® fluid is sprayed into SCR-fitted vehicle exhaust systems, where the ammonia in AdBlue® interacts with Nitrogen Oxides (NOx) in exhaust emissions. This system allows conversion of up to 90% of NOx emissions into harmless nitrogen gas and water.

Demineralised Water 67.5%

Technical Grade Urea 32.5%

How to use AdBlue®

Put AdBlue® in your vehicles designated tank. Never pump into your diesel tank!

Never use AdBlue® contaminated with water, or any foreign substances.

Keep AdBlue® dispensing equipment clean and free of dust, dirt or grime.

Rinse AdBlue® spills with water to avoid slipping hazards or surface corrosion.

Store AdBlue® in a cool place away from direct sunlight.

AdBlue® FAQs

Is BioBlue AdBlue VDA Certified?

Yes! BioBlue is VDA Certified. Our high-quality AdBlue® meets all ISO 22241 Quality Management standards.

Does BioBlue provide storage tanks and dispensing equipment?

BioBlue supplies Australia's leading range of AdBlue® tanks, storage, and dispensing solutions.

How much AdBlue do I need?

Typical AdBlue® use is 5% of vehicle fuel consumption. Therefore, approximately 5L of AdBlue® is required per 100L of diesel.

How should I store AdBlue?

AdBlue® should be stored in cool conditions and away from direct sunlight to preserve chemical integrity. AdBlue® has an expiry date approximately 12 months from manufacturing. Refer to Safety Data Sheet.

Is AdBlue toxic?

AdBlue is a non-toxic, non-environmentally harmful, and biodegradable solution. Rinse skin thoroughly on contact. While not poisonous, if consumed by accident, contact a Doctor.
